

GREEN ELECTRICITY CERTIFICATION FOR HYDROPOWER PLANTS

<i>The aim of this document</i>	1
<i>Acknowledgements</i>	3

Part I GREEN HYDROPOWER 5

1 Introduction	7
1.1 Background	7
1.2 Green hydropower	8
2 The <i>greenhydro</i> certification concept	9
2.1 Rationale	9
2.2 Requirements for green electricity certification	10
2.3 Basic ecological standards for certified facilities	10
2.4 Eco-investments	12
2.5 Applicability and individual flexibility	12
3 Implementing the <i>greenhydro</i> procedure in Switzerland	13

Part II PROCEDURE FOR GREEN ELECTRICITY CERTIFICATION

4 Procedural format	17
5 Preliminary study	18
5.1 Aim and function of the preliminary study	18
5.2 System overview	18
5.3 Clarification of relevant tasks to be conducted	19
5.4 Cost estimate	22
6 Management program	22
6.1 Aim and function of the management program	22
6.2 Individual arrangements for the management fields	23
6.3 Consultation with local stakeholders	25
6.4 Action plan produced by the management program	25
7 Auditing and success monitoring	26

Part III AIMS AND REQUIREMENTS OF THE MANAGEMENT PROGRAM

8 Basic requirements for green electricity	29
9 Basic requirements for minimum flow regulations	35
9.1 Objectives for ecologically based minimum flows	35
9.2 Basic requirements for assessing ecologically based minimum flows	38
10 Basic requirements for hydropeaking	41
10.1 Objectives for ecologically based hydropeaking	41
10.2 Basic requirements for assessing ecologically based hydropeaking	43
11 Basic requirements for reservoir management	45
11.1 Objectives for ecologically based reservoir management	45
11.2 Basic requirements for assessing ecologically based reservoir management	49
12 Basic requirements for bedload management	52
12.1 Objectives for ecologically based bedload management	53
12.2 Basic requirements for assessing ecologically based bedload management	55
13 Basic requirements for power plant structuring	57
13.1 Objectives for ecologically based power plant structuring	57
13.2 Basic requirements for assessing ecologically based power plant structuring	59

Part IV ANNOTATED BIBLIOGRAPHY

14	Annotated Bibliography	63
14.1	Literature and methodologies for studies in the field of minimum flow regulations	67
14.2	Literature and methodologies for studies in the field of hydropeaking	73
14.3	Literature and methodologies for studies in the field of reservoir management	77
14.4	Literature and methodologies for studies in the field of bedload management	83
14.5	Literature and methodologies for studies in the field of power plant structuring	89

Part V APPENDIX

A1	System overview	95
A 1.1	Contents and level of analysis	95
A 1.2	Overall evaluation of the system overview	95
A 1.3	Parameters to adopt	96
A2	The BWG's cast study for flood protection (in German)	100
A3	The VUE's procedure for certification of naturemade star hydroelectric plants (in German)	103
A4	Example of a cost estimate for green power certification	107
A5	Glossary	111
A6	Bibliography	117
A 6.1	Literature used in the conceptual part	117
A 6.2	Literature used for the annotated bibliography	117
